

RESIN ABOVE GROUND POOL FENCING FEATURES & SPECIFICATIONS

- VINYL WORKS CANADA manufactures all models of Resin Pool Fencing to meet or exceed ANSI / APSP requirements for pool fencing / barrier protection for above ground / on-ground swimming pools
- Fencing is available in both 24" and 36" heights. Both heights of pool fencing are manufactured to fit most any make, size and shape of rigid wall above ground swimming pool (soft-sided pools excluded)
- Both heights of fencing are manufactured using maintenance free resins. All hardware provided is stainless steel
- Open-air spacing between the pickets of all fencing systems / models does not exceed 4" (actual spacing of 3-3/4" – 3-7/8" max). The installation instructions specify that the open-air spacing from the last picket to the vertical support post, for both models of fencing, should not exceed 4" as well. "Premium" fence kit models include pickets that are flat stock oval with a double reinforcing rib within for greater strength. The oval pickets are not only stronger but offer a nicer appearance on the pool. "Economy" fence kit models include a standard 5/8" round fence picket
- The installation instructions for both heights and models of fencing specify that the opening from the bottom of the bottom rail to the top rail of the pool not exceed 2" in height
- All pool fencing is manufactured with at least 65% of the fencing remaining open area to allow for clear visibility of the pool swimming area and those swimming within ~ this is important for safety
- All fence sections measure 64-1/2" in length and can be cut to fit specific pool requirements (varying between pools)
- All pool fencing models are mounted directly to the vertical upright posts of the pool using two special self-tapping stainless screws. All models and heights of fencing utilize a molded mounting bracket. The brackets attach to the pool uprights and the fence posts mount into the brackets. Stainless hardware is used throughout the fence. The mounting brackets are made of vinyl with reinforcing ribs for greater strength. Premium fence kit models include injection molded telescoping mounting brackets that allow the fence to fit better on most pools. The brackets are supplied for flush mount but can be trimmed to accommodate round face uprights or uprights with a center rib
- The horizontal rails on all models of fencing are secured to the vertical posts using stainless steel screws, both through the face of the posts and inside the posts for greater strength
- All models of fencing are packaged modularly in three convenient packs; an A, B or C. Each pack / box has different contents (quantity of fence sections). Combinations of packs can be used to obtain the required amount of fencing for any given pool. Refer to our Fencing Breakdown Charts or Buyers Guide to determine your specific requirements
- Pool fence kits are recommended to be used with Vinyl Works Canada's Decks, Step Entry Systems or Ladders to totally enclose and protect the pool. The fencing can be secured directly to our Decks, Step Entry Systems or our Ladders using a **CONNECTOR KIT**. Various connector kits are manufactured and used based upon what type of product you choose to use with your pool. Vinyl Works Canada connector kits will **ONLY** work with Vinyl Works Canada entry products. Contact your retailer or Vinyl Works Canada directly for assistance determining which is required for your pool situation. All connector kits are sold separately
- Vinyl Works Canada manufactures a **REMOVABLE SECTION KIT**. The removable section kit is designed to provide the pool owner with an easy access to their pool while maintaining the security of the fence. They can also be used as a gate in place of the pool entry system. The kits are commonly used for vacuuming, working solar cover reels, adding chemicals, testing pool water, or installing / removing winter covers. Multiple kits can be used on a pool but not directly beside one another. Removable Section Kits can be used with all models of pool fencing. Sold separately
- **SOLAR FENCE KIT LIGHTS** are available for all models of Vinyl Works Canada pool fence. The lights are designed to enhance the pool environment at night. They attach directly to the fence posts with a custom molded bracket. All solar fence kit lights are sold separately and designed specifically for use with Vinyl Works Canada fence only
- Vinyl Works Canada reserves the right to change or alter any manufacturing specification within the specified code restrictions. If you have any questions regarding our pool fencing or other products please do not hesitate to contact our customer service at toll free 1-877-VINYL WK or cserv@vinylworkscanada.com for assistance
