

SCALEfree Instructions

This product is designed for use in properly balanced pool water.

Following dosage chart below, add the recommended initial dosage of SCALEfree directly to the pool.

Note: If water hardness level in existing pool water is above 500ppm (parts per million), follow recommendations for fresh fill initial dose. Brushing is required. After initial dose, proceed with recommended maintenance. Do not use with biguanides.

Dosage Chart

Pool Size	Initial Dose		Maintenance
	Fresh Fill	Existing Pool Water	Monthly Dosage
10,000 gallons	64oz	32oz	5oz
20,000 gallons	128oz	64oz	10oz

* If preferred, SCALEfree can be added weekly. Take the recommended monthly dosage and divide it by 4.

Important: SCALEfree works by keeping calcium and other metals in solution so they are unable to form scale or stains on pool finishes. It does not physically remove the calcium or other metals from the water and therefore will not affect readings on water test results.
