Durasport® Spas
Mission:

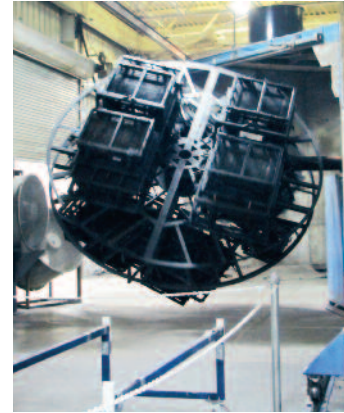

Durasport Spas is committed to creating the industry's most innovative products.

We focus on producing state-of-the-art spas that deliver clean, efficient, reliable performance without compromise.

Our spas are truly portable and easy to install... at affordable prices to fit everyone's budget.

The Process of Rotational Molding

Rotational molding, also known as "roto-mold", is a highly advanced manufacturing technique used to create our spas. The process begins with a hollow, two-part mold, which is filled with granular polyethylene polymer (advanced high-impact resistant powder plastic). The mold is then mounted to a sophisticated machine, which externally heats while biaxially rotating the mold. The heat softens the powder into liquid form. As the mold rotates, the "melted material" coats the inside of the mold. Intelligent software distributes the material evenly to ensure consistency of product. Once cooled, the two-part mold is opened, revealing a single piece uni-body constructed spa. The benefits of this manufacturing process is that our spas contain NO wood, metal or vinyl, which means

they will never fade, rot, rust or tear. Also, they have the ability to withstand impact... quite literally an indestructible cabinet. A Durasport™ Spa will look as beautiful in years to come as it does on the first day. We back that with the industry's first LIFETIME WARRANTY!

Indulge in Eco-Friendly luxury!

Being environmentally friendly is not just a marketing catch phrase for our company. Reducing our product's carbon footprint is something we take very seriously. Durasport is one of the greenest spas on the market for the following reasons:

- Hybrid Heat System... two heat sources run at the cost of one!
- Reduced electrical consumption with efficient pumps and heaters.
- Use less volume of water, therefore helping to conserve our fresh water supplies.
- High-density, closed-cell insulation combined with a quality insulated cover ensure maximum heat retention and lower operating costs.
- NO use of fiberglass (which releases styrene gas into atmosphere).
- Fewer chemicals required with our effective filtration system along with the optional ozone system.
- Durasport Spas are 100% recyclable.
- Eco-Friendly Factory utilizing carbon offsetting practices.

The Durasport® Spas Advantage:

- ✓ All-Season Hybrid Heat System (year-round use).
- ✓ Quality Components.
- ✓ Generous Jet count.
- ✓ Multi-level ergonomic seating.
- ✓ Efficient High Output pumps.
- ✓ LED mood lighting.
- ✓ Lifetime cabinet warranty.
- ✓ Simple 1-2-3 installation!

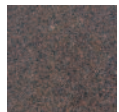

Delivering pure luxury without compromise at affordable prices.

spa fact:

HP vs. hype

Horsepower (HP) is a unit of electrical measure (1HP = 746 watts).

Jet Power is determined by Gallons Per Minute (GPM).

Our high-efficiency pumps require **less HP**, however, produce **higher GPM** (GPM), therefore...

higher performance!

the look and feel of an acrylic spa at a very affordable price
