

Tishway Specifications

Tishways are available in two standard widths (A); 1inch and 3inch. Standard depth (B) is 12 inches, standard height(C) is 1inch for both widths. Custom orders are available in straight or radius design.

Tishways are sold in kits. The 1-inch kit includes (12) 1inch metal spouts and one 36-inch ABS plastic mounting template. The 3-inch kit includes (6) 3-inch spouts, and one ABS plastic mounting template.

You can purchase more spouts individually for your unique design. The mounting template allows for a variety of spacing layouts, some examples appear to the right.

It is recommended that the water fill for the top reservoir is 30" below the surface, and a three-way by-pass valve available at the equipment to regulate flow. Spouts are to be installed beyond the surface wall at the break over point. Complete instructions included with kit.
